TRACK VEHICLE HEALTH WITH THE CHEVROLET INSIGHT REPORT

The Chevrolet Insight Report can help business owners manage maintenance and operating costs of one of their most essential investments — their work vehicles. Insight provides key technology that tracks vehicle health on Low Cab Forward (LCF) models, helping owners manage total cost of ownership and keep their trucks where they need them — on the road.

Insight is a new standard feature on every 2016MY and newer diesel-powered LCF model that monitors vehicle systems and issues a printed or emailed status report at your dealership, informing owners about:

- Engine condition
- Emissions system condition
- Brake usage history
- Accelerator frequency
- Average fuel economy
- Fuel consumed
- Engine cooling history
- Distances traveled

**HOW IT WORKS**

- Chevrolet Insight Report provides key data to help owners manage the total cost of ownership of their fleet of LCF vehicles
- At each service visit, Chevrolet technicians can generate a detailed report regarding the LCF truck, including operating status of key components, driving behaviors and potential issues
- Reports can be printed or emailed
- Chevrolet Insight Report is designed to provide data to help control vehicle operating costs, which can lead to better maintenance decisions and better driving habits

**HOW IT HELPS MANAGE COSTS**

- Insight Reports help identify potential issues before they become more critical problems
- Insight Reports help take the guesswork out of vehicle maintenance — customers will have better insight to know the servicing needs of each vehicle

**HOW DO I LEARN MORE?**
